The principal early minerals are calcite and fluorite. The late minerals are considered to be secondary, *i.e.*, crystallized from an aqueous fluid phase. Symbols: Aln-(Ce): allanite-(Ce), Anh: anhydrite, Ap: apatite, Bri-(Y): britholite-(Y), Bsn-(Ce): bastnäsite-(Ce), Cal: calcite, Fl: fluorite, Gn: galena, Hem: hematite, Ilm: ilmenite, Qtz: quartz, Syn-(Ce): synchysite-(Ce), Ttn: titanite, Ytt-(Y): yttrialite-(Y).
